

❖ ISO 27001 Consulting

ISO 27001 (formerly BS7799) provides organisations with the assurance of knowing that their information is being protected using controls commonly used by well-managed businesses

An excellent framework for those developing or enhancing their organisation's security, ISO 27001 helps to identify, manage and reduce the range of threats to which information is regularly subjected.

7Safe has a wealth of expertise in ISO 27001 and this is backed up with its own certification to the standard. 7Safe assists organisations with training, compliance and implementation, having helped clients right through ISO 27001 certification by providing appropriate levels of consulting at each stage as required.

7Safe also runs regular ISO 27001 training courses which are the first of their kind to be university-accredited to Masters-level.

❖ Scope

Scoping an ISO 27001 project is a fundamental part of any certification initiative.

7Safe will help you identify the business processes which are vital to your company, and in doing so will create a solid foundation for building an effective certification strategy.

❖ Gap Analysis

Our consultants will perform a comprehensive assessment of your existing security processes and how they are managed, then compare them to those required by the ISO 27001 standard. A detailed report will be generated identifying the actions required to attain certification.

❖ Risk Assessment

7Safe will help you to evaluate the levels of information security risk involved in your business processes. Consequently a risk treatment plan can be generated, detailing security control measures to be taken in order to counter the risks identified.

❖ Implementing improvements

7Safe will rationalise the results of the gap analysis and the risk assessment to develop a comprehensive Security Improvement Programme.

Our consultants will help you to implement the required security improvements and also assist in the creation of an explanatory security control document known as the Statement of Applicability (SOA). 7Safe's extensive experience means that it is able to provide informed and practical solutions to issues that may arise in each area of the Standard.

❖ Gaining Certification

7Safe's consultants can guide you through the process of gaining certification. They will assist with final preparations to your ISMS, and also act on your behalf when organising the audit progress. Many clients have found our close involvement to be extremely advantageous during this decisive stage of the process.

❖ Benefits

The provision of a framework for resolving security issues

Can be a deciding differentiator in contract tenders

Enhancement of client confidence and perception of your organisation

Enhancement in business partners' confidence and perception of your organisation

Provides confidence that you have managed risk in your own security implementation

Enhances security awareness within an organisation

Assists in the development of best practice

❖ Case Studies

❖ Web based services provider

A company with 125 staff was asked to obtain ISO 27001 certification within twelve months, in order to retain the multimillion pound contract they held with a client.

The company engaged 7Safe to undertake a large part of the work needed to set up the Information Security Management System (ISMS).

The ISMS entailed agreeing scope, identifying relevant assets, undertaking risk analysis and preparing the Statement of Applicability. These actions encouraged senior management to take a much more active role in relation to information security.

❖ Result:

The company passed their ISO27001 certification audit with zero non-conformities. The ISMS external auditor was particularly impressed with the electronic ISMS system that 7Safe had used to compile and check Standard requirements throughout the consultancy period.

During the process the company made significant improvements in their working practices. Information security training and awareness presentations at induction manifested a secondary benefit of helping to reduce the turnover of staff, as their opinions became increasingly welcomed and valued by the company.

❖ IT consulting company

This fast-growing firm decided to achieve certification in order to boost its chances of securing a greater number of government tenders.

A gap analysis by 7Safe revealed that the firm was already largely compliant with ISO 27001. By formalising many of the existing activities and procedures as assisted by the 7Safe consultant, the company produced an ISMS in a matter of weeks.

❖ Result:

The company passed their ISO 27001 certification audit with zero non-conformities. After achieving certification they saw a notable increase in the number of public sector contracts they secured.

University Accredited Training

An organisation's employees are an important part of the information assurance equation, and many parts of ISO 27001 refer to training and involvement of staff.

7Safe's university-accredited Implementing ISO 27001 training course has proven to be increasingly important to individuals working within the area of information security management. It forms part of our extensive Masters-level education programme.

We can tailor the course to meet the requirements of your organisation and are experienced in running courses on-site.
