

7Safe Security Assessment

Does your company need a security 'Health Check'?

How 7Safe's experts can help

7Safe's Security Assessment team provide a flexible service which meets the bespoke requirements of our clients, giving technical guidance to improve the information security of key assets. Central to this is ensuring the client, with 7Safe's guidance, is able to identify the key areas to assess, controlling the scope of the work and ensuring value.

Security Assessment blends 7Safe's skills in Penetration Testing, Incident Response, Auditing and Forensics to provide the expertise required to address client's unique needs. 7Safe's position at the forefront of Data Compromise Investigation gives the team a unique insight into the real threats faced by companies in an increasingly unpredictable world. 7Safe leverage this knowledge to ensure that the scope and recommendations are focused on tackling the real threats to your company's vital assets.

The 7Safe Testing Process

The Security Assessment is a detailed, thorough and extensive process involving the following stages:

Identification	Determine key assets for which information security is important
Threat modelling	Identifying the practical threats against the key assets to ensure the assessment tackles the real threats
Testing	Testing the technical and process based controls that are currently in place
Gap Analysis	Analysing the results from tests to ascertain security shortfalls
Remedial Action	Produce a remedial action plan
Reporting	Detailed findings & recommendations
