

CORE IMPACT Certified Professional

The CORE IMPACT Certified Professional (CICP) programme is an instructor-led training and certification course, available as a supplement to the online training included with every CORE IMPACT license.

The programme helps participants get the most value from security assessments by combining in-depth product training with guidance on planning, promoting, conducting and reporting on highly targeted penetration tests.

This two-day training programme can be tailored to address the specific aspects of IMPACT Pro and the security testing process that apply most to your organisation's environment, level of pen testing experience, and testing goals. Participants have the opportunity to conduct real-world, hands-on penetration testing against lab environments specifically designed to reinforce and deepen the understanding of principles presented during the class.

Upon passing a competency examination consisting of questions designed to validate IMPACT Pro product knowledge, attendees receive a certificate confirming they are a CORE IMPACT Certified Professional. By attending CICP training, Certified Information Systems Security Professionals (CISSPs) also receive credits toward maintaining their certificates, recognized by (ISC)2.

CICPs are recognised as professional CORE IMPACT users and practitioners of comprehensive, commercial-grade penetration testing. Even the most experienced users are sure to walk away from the CICP program with new tips and tricks that expand their CORE IMPACT penetration testing skills.
